

## Week1 monday

Alphabet e.g. $\Sigma, \Gamma$	non-empty finite set
Symbol over $\Sigma$	element of alphabet $\Sigma$
String over $\Sigma$	finite list of symbols from $\Sigma$
Language over $\Sigma$	set of strings over $\Sigma$
Empty set $\emptyset$	the empty language
<i>Pages 3, 4, 13, 14</i>	

With  $\Sigma_1 = \{0, 1\}$  and  $\Sigma_2 = \{a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, t, u, v, w, x, y, z\}$  and  $\Gamma = \{0, 1, x, y, z\}$

An example of a string of length 3 over  $\Sigma_1$  is

An example of a string of length 1 over  $\Sigma_2$  is

The number of distinct strings of length 2 over  $\Gamma$  is

An example of a language over  $\Sigma_1$  of size 1 is

An example of an infinite language over  $\Sigma_1$  is

An example of a finite language over  $\Gamma$  is

Empty string $\varepsilon$	the string of length 0
Reverse of a string $w$ , $w^R$	write $w$ in the opposite order, if $w = w_1 \cdots w_n$ then $w^R = w_n \cdots w_1$
Concatenating strings $x$ and $y$	take $x = x_1 \cdots x_m$ , $y = y_1 \cdots y_n$ and form $xy = x_1 \cdots x_m y_1 \cdots y_n$
String $z$ is a substring of string $w$	there are strings $u, v$ such that $w = uzv$
String $x$ is a prefix of string $y$	there is a string $z$ such that $y = xz$
String $x$ is a proper prefix of string $y$	$x$ is a prefix of $y$ and $x \neq y$
<i>Pages 13, 14</i>	

$\varepsilon \in \Sigma_1$	True	False
$\varepsilon$ is a string over $\Sigma_1$	True	False
$\varepsilon$ is a language over $\Sigma_1$	True	False
$\varepsilon$ is a prefix of some string over $\Sigma_1$	True	False
There is a string over $\Sigma_1$ that is a proper prefix of $\varepsilon$	True	False

**String order** over alphabet  $\Sigma$ : Order strings over  $\Sigma$  first by length and then according to the dictionary order, assuming symbols in  $\Sigma$  have an ordering.

The first five strings over  $\Sigma_1$  in string order, using the ordering  $0 < 1$ :

The first five strings over  $\Sigma_2$  in string order, using the usual alphabetical ordering for single letters:

Assuming $A$ and $B$ are languages over alphabet $\Sigma$	
The union $A$ and $B$	$A \cup B = \{x \mid x \in A \text{ or } x \in B\}$
The concatenation of $A$ and $B$	$A \circ B = \{xy \mid x \in A \text{ and } y \in B\}$
The star of $A$	$A^* = \{x_1x_2 \cdots x_k \mid k \geq 0 \text{ and each } x_i \in A\}$
<i>Definition 1.23 page 44</i>	

Assuming $\Sigma$ is the alphabet, recursive definition of regular expressions is		
$a$ is a regular expression	for $a \in \Sigma$	$L(a) = \{a\}$
$\varepsilon$ is a regular expression		$L(\varepsilon) = \{\varepsilon\}$
$\emptyset$ is a regular expression		$L(\emptyset) = \{\} = \emptyset$
$(R_1 \cup R_2)$ is a regular expression	for $R_1, R_2$ regular expressions	$L( (R_1 \cup R_2) ) = L(R_1) \cup L(R_2)$
$(R_1 \circ R_2)$ is a regular expression	for $R_1, R_2$ regular expressions	$L( (R_1 \circ R_2) ) = L(R_1) \circ L(R_2)$
$(R_1^*)$ is a regular expression	for $R_1$ a regular expression	$L( (R_1^*) ) = ( L(R_1) )^*$
<i>Definition 1.52 page 64</i>		

Assuming $\Sigma$ is the alphabet, we use the following conventions	
$\Sigma$	regular expression describing language consisting of all strings of length 1 over $\Sigma$
$*$ then $\circ$ then $\cup$	precedence order, unless parentheses are used to change it
$R_1R_2$	shorthand for $R_1 \circ R_2$ (concatenation symbol is implicit)
$R^+$	shorthand for $R^* \circ R$
$R^k$	shorthand for $R$ concatenated with itself $k$ times
<i>Pages 63 - 65</i>	

For the following examples assume the alphabet is  $\Sigma_1 = \{0, 1\}$ :

Regular expression, $R$	Language described by the regular expression, $L(R)$
0	$\{0\}$
1	$\{1\}$
$\varepsilon$	$\{\varepsilon\}$
$\emptyset$	$\emptyset$
$((0 \cup 1) \cup 1)$	
$1^+$	
$\Sigma_1^*1$	
$(\Sigma_1\Sigma_1\Sigma_1\Sigma_1\Sigma_1)^*$	
$1^*\emptyset 0$	
	$\{00, 01, 10, 11\}$
	$\{0^n 1 \mid n \text{ is even}\}$
